

What you should know about COVID-19 vaccines

SIDE EFFECTS ARE NORMAL

You may experience some or none at all. Side effects are just an indication that your body is working to build protection against the virus. These side effects may occur within a day or two of getting the vaccine and should go away within a few days.

Here's what you may experience:

On the arm where you got the shot

- Pain
- Redness
- Swelling

Throughout the rest of your body

- Tiredness
- Chills
- Headache
- Fever
- Muscle pain
- Nausea

YOU NEED TO KEEP PROTECTING YOURSELF

Continue to practice the 3 Ws when out in public, as recommended by your local and state guidance:

Wear a mask

Watch your distance

Wash hands frequently

HOW LONG UNTIL YOU'RE FULLY VACCINATED

You're not fully vaccinated until two weeks after your second dose of the Pfizer/BioNTech or Moderna COVID-19 vaccines, and two weeks after the single-dose Johnson & Johnson COVID-19 vaccine.

www.cdc.gov/coronavirus/2019-ncov/vaccines.

THE VACCINES ARE SAFE AND EFFECTIVE

Vaccines have undergone extensive and rigorous testing prior to FDA authorization. Per the CDC, "The U.S. vaccine safety system ensures that all vaccines are as safe as possible."

The Pfizer/BioNTech, Moderna and Johnson & Johnson clinical trials showed the vaccines are **over 99% effective at preventing hospitalizations and deaths.**¹

The CDC recommends you get the vaccine even if you have already had COVID-19 and recovered.²
